Whitepaper

Version 1.7 - April 2021

# Overview

The DeFi space has exploded in the recent months.

Yield Farming, Staking and Liquidity Mining have taken the space by storm, with participants earning by basically "locking" their tokens for a time.

While generally great, these concepts have one downside: impermanent loss (IL). If you are farming/staking and the value of the underlying token changes significantly, even though you still get rewards, the value will far less than if you simply held your tokens.

# TokenEconomics

# Smart Contracts

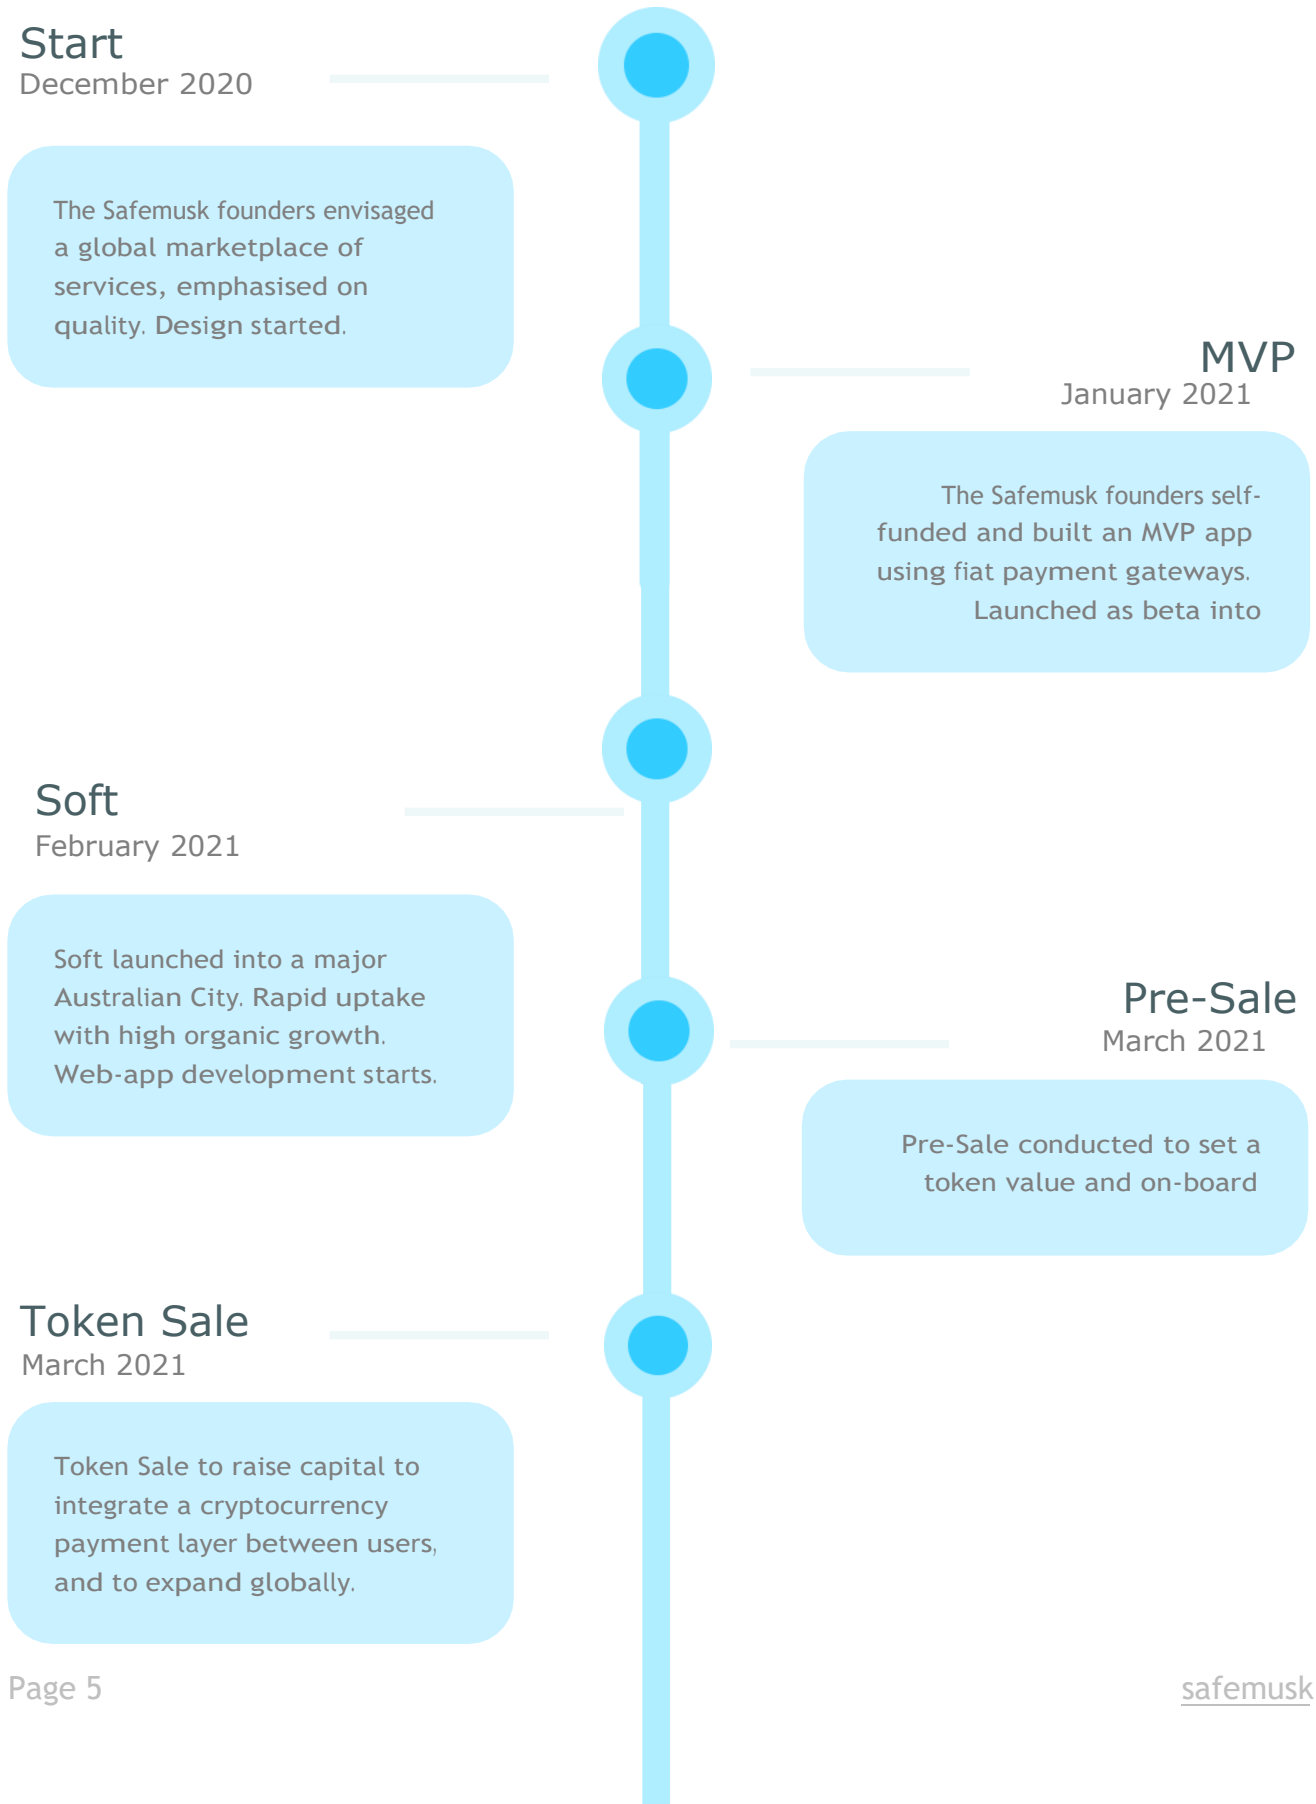

Bep20 smart contracts provide a trustless hedged escrow which aims to protect cryptocurrency value for users, as well as processing the platform revenue stream and disseminating rewards for incentivised network effects.

## What is a Smart Contract?

A smart contract is a fully automated protocol that exists on the blockchain in order to facilitate, verify and then execute the performance of an agreement. Smart contracts allow users of blockchain technology to make good on promises that have been specified in digital form without the need for third parties or written documentation.
